

U.S. Products Containing 8 or more grams of Whole Grain (per serving)

Eating grains, especially whole grains provides health benefits. People who eat whole grains as part of a healthy diet have a reduced risk of some chronic diseases. Grains provide many nutrients that are vital for the health and maintenance of our bodies. The 2010 Dietary Guidelines recommend consuming at least half of all grains as whole grains. Increase whole grain consumption by replacing refined grains with whole grains. Examples of whole grains are whole wheat, whole corn, oatmeal, popcorn, barley and brown rice. Diets rich in whole grain foods and other plant foods, and low in saturated fat and cholesterol, may help reduce the risk of heart disease.
